

Class - VI / Biology / Worksheet - Ch-1

Q1. Name the following:-

- a) Study of tissue
- b) Group of cells performing specific function.
- c) Dividing cells at the tip of roots and stems.
- d) The muscles that are found in the wall of heart.
- e) The muscles of alimentary canal.

Q2. Fill in the blanks:-

The nervous tissue is formed of a) and b).  
A neuron consists of c) and d). Cyton is e) shaped. Its cytoplasm called f).  
It has a large g), several h) i) and fine, threadlike j).

Q3. Match the col-A with appropriate word of col-B, :-

Col-A

Col-B

- |                     |                           |
|---------------------|---------------------------|
| a) Axon             | * Heart                   |
| b) skeletal muscles | * Limbs                   |
| c) WBC              | * Adipocyte               |
| d) Store fat        | * connective tissue       |
| e) Packing tissue   | * epithelium              |
| f) outer covering   | * endothelium             |
|                     | * helps in blood clotting |
|                     | * Kill microbes           |
|                     | * Nerve fibre             |

Q4. Draw the following diagramme with proper Labelling:

- a) Three blood particles
- b) water conducting tissue
- c) Three types of supportive simple permanent tissue
- d) A nerve cell.
